HI501: Health Informatics
Health informatics deals with the resources, devices, and methods required to optimize the acquisition, storage, retrieval, and use of information in health and biomedicine. This course introduces the history and development of health informatics. It focuses on such issues as the structure, function, and transfer of information, sociotechnical aspects of health computing, and human-computer interaction. Students will also explore medical decision making, natural language processing, and knowledge discovery in the clinical setting.
Quarter Credit Hours: 4 | Prerequisite: None

HI510: Health Information Applications and Systems
In this course you will learn how to evaluate health information systems and clinical data workflow, and integrate selected applications into a health information system. You will utilize health information systems technologies to assess the importance of consumer engagement within health care, and how to advocate for the use of health information systems for population health management.
Quarter Credit Hours: 4 | Prerequisite: None

HI520: Database Design and SQL
This course covers fundamental database design topics in a health care context, including data modeling, entity-relationship diagrams, the top-down database design methodology, the bottom-up database design methodology, functional dependencies, and the normalization process. You will learn about Structured Query Language (SQL), which is used to retrieve and modify health care-related data in relational databases. This course emphasizes designing queries for optimum performance and using query execution plans as a tool for creating appropriate indexes to improve query performance.
Quarter Credit Hours: 4 | Prerequisite: None

HI530: Clinical Terminologies, Vocabularies, and Information Standards
This course focuses on the use of health care terminologies, vocabularies, and classification systems. You will identify their appropriate uses and sources, and apply them within health information systems to promote effective communications and data integrity.
Quarter Credit Hours: 4 | Prerequisite: None

HI540: Project Management of Health Information Systems
In this course, you will build on industry standard concepts, techniques, and processes to develop a comprehensive foundation for project management activities. During a project’s life cycle, you will develop the critical skills necessary to provide guidance for the behavior of people involved in projects as they influence and shape the performance domains to produce the intended outcomes. You will apply best practices in areas such as scope management, resource allocation, project planning, project scheduling, quality control, risk management, performance measurement, and project reporting.
Quarter Credit Hours: 4 | Prerequisite: None

HI550: Organizational Development and Management for Health Information
This course explores organizational behavior, theory, and development as they apply to health information management. Topics include, but are not limited to, performance management plans, strategic forecasting, and public policy.
Quarter Credit Hours: 4 | Prerequisite: None

HI560: Health Care Data Analytics
This course provides foundational skills and knowledge in health care data analytics that will equip you to contribute more effectively to local data analytics and performance improvement efforts.
Quarter Credit Hours: 4 | Prerequisite: None

HI570: Legal and Ethical Issues in Health Information
This course covers data security, privacy, and confidentiality of health information as it relates to information technology and management. Topics include risk management, information security, and data validity and integrity. Students will also examine disaster recovery plans for data and service delivery.
Quarter Credit Hours: 4 | Prerequisite: None

HI580: Information Systems Design and Implementation
This course will provide a working knowledge of the planning, design, implementation, and evaluation of information technology as related to health care systems. You will be introduced to the infrastructure of information systems including computer networking, applications and storage, security of information systems, and integration of that knowledge to the design and implementation of a new system. The course will explore health systems trends and emerging technologies.
Quarter Credit Hours: 4 | Prerequisite: None

HI595: Master's Capstone in Health Informatics
The capstone course is the culminating experience for the Master of Health Informatics. This course builds on the concepts of all the courses you have taken within the program of study. The capstone course provides you with the opportunity to integrate and synthesize the knowledge and skills acquired through your coursework in an original comprehensive project, and to assess your level of mastery of the stated outcomes of your degree program in health informatics.
Quarter Credit Hours: 4 | Prerequisite: Last term

HI599: Master's Capstone in Health Information Management
The capstone course is the culminating experience for the Master of Health Information Management. This course builds on the concepts of all the courses students have taken within the program of study. The capstone course provides students with the opportunity to integrate and synthesize the knowledge and skills acquired through their coursework in an original comprehensive project, and to assess their level of mastery of the stated outcomes of their degree program in health information management.
Quarter Credit Hours: 4 | Prerequisite: Last term
